

Screen shot showing the choices / commands available when selecting a sweep. Cannot modify the return.

Screen shot showing the integral wall sweep being interrupted by the window. I have tried to set the sweep to be both cutting and non-cutting, with no success. The 'unjoin elements' option will not resolve the issue and I must cancel.

Screen shot showing:

1. Wall on left is attached to the floor above ... the flashing sweep within the brick wall has disappeared.
2. Wall on right shows the flashing sweep not wrapping at the end of the wall (or at an opening)

Please advise ...

Thank you
